

Summary: What Does All This Data Mean For Us?

What is it?	Who will this help the most?	Why will it help them?
Sunshine Act	The Government	While this can help curb bribery and outside incentives on impacting a physician's quality of care, there hasn't been much enforcement until recently. More is to be expected in the future.
Price Transparency	Hospitals and Third Parties	This data will be helpful in the sense that the open data of hospital pricing can drive a more competitive market. Whether that will bring down prices is yet to be known.
Info Blocking Rule	Consumers	This data will allow consumers easier access to their HIPAA information.
CMS Star Ratings	Consumers	This data will be the most helpful in driving behavior and helping consumers make more informed decisions about their care.
